

Surface and groundwater

Current research projects are looking at maximising the amount of treated coal seam gas water that can be re-injected into aquifers

RE-INJECTION OF COAL SEAM GAS WATER—understand how to minimise clogging of re-injection wells

HIGH PERFORMANCE GROUNDWATER MODELLING - determine the possibility of large scale re-injection programs.

<u>GROUNDWATER BASLINE MONITORING</u>—understand the origin and age of groundwater prior to and during initial stages of development.

HYRDOCARBONS IN GROUNDWATER, SURAT AND BOWN BASINS - assess the presence and source of hydrocarbons found in the Surat and Bowen basins CONSTRAINING WATER FLOWS IN THE SURAT BASIN – measuring and modelling specific chemicals called environmental tracers to gain a better understanding of the

speed and direction of groundwater flow IMPACTS OF CSG DEPRESSURISATION ON THE GREAT ARTESIAN BASIN FLUX - improve the understanding of the GAB groundwater flow in the Pilliga region through

integration of existing information from models, hydrochemical data and environmental tracers. SPATIAL DESIGN OF GROUNDWATER MONITORING NETWORK IN THE NARRABRI GAS PROJECT AREA – analysis and design of groundwater bore networks for optimal groundwater monitoring and early detection of changes.

IMPROVING THE REPRESENTATION OF THE IMPACT OF CSG EXTRACTION IN GROUNDWATER FLOW MODELS FOR THE NAMOI REGION. develop more representative

models for estimating the groundwater impacts from coal seam gas well fields. GROUNDWATER CONTAMINATION RISK ASSESSMENT – analysing and designing optimal groundwater bore networks for groundwater monitoring will provide early detection of changes.

AIR, WATER AND SOIL IMPACTS OF HYDRAULIC FRACTURING—Phase 1 - design an intensive monitoring campaign that will measure the air, water and soil impacts of hydraulic fracturing of production wells in the Surat Basin

AIR, WATER AND SOIL IMPACTS OF HYDRAULIC FRACTURING, PHASE 2— (new)- involves undertaking a comprehensive monitoring campaign to measure the air, surface $water \ groundwater \ and \ soil \ impacts \ of \ hydraulic \ fracturing \ of \ gas \ production \ wells \ in \ the \ Surat \ Basin, \ Queensland.$

Agricultural land management

Current research projects are designed to maximise agricultural productivity during and beyond the life of gas extraction on farms.

PRESERVING AGRICULTURAL PRODUCTIVITY – land use planning to help protect agricultural productivity.

 $\underline{\textit{SHARED SPACE-}} \ \textit{understand how farmers perceive and value coal seam gas developments on their and others' farms.$

GAS FARM DESIGN - understand how to design farms for a new mixed land use.

and dust on animals and pastures.

MAKING TRACKS, TREADING CAREFULLY - understand the impacts of tracks and traffic on weeds and erosion in agricultural landscapes.

100% WITHOUT A TRACE - identify the nature and extent of damage to agricultural soils, and methods for improving soils.

 $\underline{\text{TELLING THE STORY}} - \text{share understanding of changes on farms and in towns during CSG development in the Surat area}.$ CSG AND LIVESTOCK- INSIDE THE HERD — monitoring grazing land with coal seam gas (CSG) infrastructure to better understand the impacts of CSG infrastructure, traffic

Socio-economic

development regions.

Current research projects are identifying what communities want and need to help inform and support changes occurring in coal seam gas

MONITORING REGIONAL TRANSITION – track and document the population and monetary changes occurring in coal seam gas development regions.

expectations that exist within the community with respect to CSG development, and current levels of community wellbeing and community resilience

COMMUNITY FUNCTIONING AND WELL-BEING 2 — conduct a community well-being survey to measure the changes since the end of the construction and start of the

COMMUNITY FUNCTIONING AND WELL-BEING — understand what makes communities strong and how they respond to major developments.

100% <u>UNDERSTANDING COMMUNITY ASPIRATIONS —</u> understand how different sectors of the community see the future of their region.

100% ECONOMIC ASSESMENT AND FORECASTING - understand future impacts on regional economies and how local businesses can respond.

operations phases and compare results with the Survey 1 in 2014. SOCIAL BASLINES ASSESSMENT OF THE NARRABRI REGION OF NSW IN RELATION TO CSG DEVELOPMENT — understand and measure attitudes, perceptions and 75%

ANALYSING ECONOMIC AND DEMOGRAPHIC TRAJECTORIES IN NSW REGIONS EXPERIENCING CSG DEVELOPMENT AND OPERATIONS - identify current levels and 100%

trajectories of economic, social and demographic variables in CSG regions and analyse if the CSG industry could change the trajectories. $\underline{\textbf{DECOMMISSIONING PATHWAYS FOR CSG PROJECTS-}} the project will review regulatory frameworks in relation to principles derived from international literature and the project will review regulatory frameworks and the project will review regulatory from the project will review represent the$ 90%

consider social concerns with regard to decommissioning of wells and well pad infrastructure TRENDS IN COMMUNITY WELLBEING AND ATTITUDES TO CSG DEVELOPMENT- SURVEY 3- (new)

Health impact

Current research projects are focusing on reviewing current information to look for potential health impacts of coal seam gas.

HUMAN HEALTH EFFECTS OF CSG - a review will be conducted of the current information to design a study on the health effects of CSG activities based on community stakeholder, governmental, expert consultation group, and industry input.

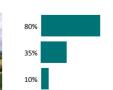

Greenhouse gas footprint

Current research project is looking at characterising methane emissions from the

METHANE SEEPAGE IN THE SURAT BASIN - measure methane seeping from underground in the Surat Basin, and identify sources of methane

WHOLE OF LIFE CYCLE GREENHOUSE GAS ASSESSMENT- analysis of the whole of life cycle GHG emissions, including extraction, transportation and usage of CSG.

AMBIENT AIR QUALITY IN THE SURAT BASIN - comprehensive assessment of air quality in the Surat Basin region in Queensland using air quality measurement network

REGIONAL METHANE EMISSIONS IN NSW CSG BASINS — identify and quantify methane emission sources such as CSG infrastructure, feedlots, coal mining, legacy bore holes in the Pilliga region

Research progress to date

How much has been completed to date?

February 2018

Terrestrial biodiversity

Current research projects are identifying cost-effective actions that can be taken to reduce threats to plants and animals.

PRIORITY THREAT IDENTIFICATION AND MANAGEMENT — identify and understand the range of existing and new threats to biodiversity across a coal seam

FIRE ECOLOGY OF GRASSY WOODLANDS — determine how sensitive animals and plants are to burning events in coal seam gas development areas.

ENSURING BIODIVERSITY OFFSET SUCCESS: RUTIDOSIS LANTANA – identify genetic and demographic factors that may limit the success of establishing a rare daisy

 $\underline{\textbf{GUIDLINES FOR OFFSET POPULTATION SIZES-improve the understanding of how ecological and biological traits of rare species of plants, commonly encountered in the property of the property$ restoration projects, and different environmental factors determine viable population sizes

HABITAT SELECTION BY TWO FOCAL SPECIES — understand the range of impacts from CSG development on Golden-tailed gecko and Glossy black-cockatoo habitats.

Marine environment

Current research projects are examining how sediments from dredging and discharge affect seagrass and turtle feeding grounds. $% \label{eq:condition} % \lab$

 $\underline{\textbf{SUSTAINING TURTLES AND THEIR HOMES-}} understand how sediments from dredging and discharges affect seagrass and turtles.$
